

GK0 - Homology of  
 aff Spr fiber in the  
 unramified case / purity of equivariant ASF.  
 Equivariant Cohomology of affine  
 Springer fibers

blue =  
remarks for  
myself

$\mathcal{D}\mathcal{E}\mathcal{T}(0)$  RSS

$F = \mathbb{C}[[\varepsilon]]$

$G = \mathbb{C}[[\varepsilon]]$

$$G_G = G(F)/G(0)$$

I blatantly refer to my talk at the  
SERG reading group for basics on  
equivariant cohomology

$\gamma \in t(0)$  regular semisimple. ("unramified case")

affine Springer fiber

$$X_\gamma = \left\{ x \in G_F \mid \text{Ad}(x^{-1})\gamma \in \gamma(G) \right\}.$$

finite dimensional ind-variet.

$$T(\mathbb{C}) \cap X_\gamma : \quad g \in T(\mathbb{A}) \quad g \circ g^G \quad = (\text{Ad}(g))g^G.$$

Question :  $H_*^{T(\mathbb{C})}(X_\gamma) = ?$

Rk:  $\gamma = at^d \in t(F)$   $a \in t^{\text{reg}}$

$$\lim_{d \rightarrow \infty} X_\gamma = X$$

Answer to the question + link gives  $H_*^{T(\mathbb{C})}(X)$ .

$\Lambda \subset T(F)$  lattice of translations

$$1 \rightarrow T(\omega) \rightarrow T(F) \xrightarrow{\text{val}} \chi_{*}(T) \rightarrow 1$$

splitting (choosing uniformizing parameter  $\varepsilon$  for  $C(\mathbb{C})$ )

w/ image  $\Lambda$

$G \supset B \supset T \rightsquigarrow \phi^+$  positive roots

$$\alpha \in \phi^+$$

$\alpha^\vee : F^\times \rightarrow T(F) \rightsquigarrow \alpha^\vee \in \Lambda$  Sym(E)

$\alpha^\vee \subset t = t^{**} \rightsquigarrow$  degree 1-monomial  $x_{\alpha^\vee} \in S(E)$

$\alpha \in t^* \simeq X^*(T) \otimes \mathbb{C} \rightsquigarrow$  degree 1-differential op.  $D_\alpha \in \mathcal{D}(E)$  Sym(E\*)

$$D_\alpha(x_{\alpha^\vee}) = 2$$

$S(E)\{\mathcal{D}_\alpha^d\}$  submodule of pol funct. annihilated by  $\mathcal{D}_\alpha^d$ .

$$L_{\alpha, r} = \sum_{d=1}^{\text{val}(\alpha^\vee(r))} (1 - x^r)^d \mathbb{C}[1] \otimes S(E)\{\mathcal{D}_\alpha^d\}$$

Thm: Suppose  $H_*(X_r; \mathbb{C})$  is pure. Then the inclusion

$\Lambda \subset X_r$  induces an exact sequence

$$T(F)/T(G)$$

$$0 \rightarrow \sum_{\alpha \in \phi^+} L_{\alpha, r} \rightarrow H_*^{T(C)}(\Lambda) \xrightarrow{\text{SI}} H_*^{T(C)}(X_r) \rightarrow 0$$

$$\mathbb{C}[1] \otimes S(E)$$

Fact GKMR Purity of equivariant Springer fibers  
 purity holds for  $\gamma = at^d$ ,  $a \in t^{rss}$   
 $d \geq 0$ .

define affine pairing of  $X_r$  by intersecting it w/ Schubert cells.

limit

$$0 \rightarrow \bigoplus_{\alpha \in \phi^+} \sum_{d=1}^{\infty} (1-\alpha^\vee) \mathbb{C}[1] \otimes S(t) \{ \alpha^d \} \rightarrow H_*^{T(\alpha)}(1) \rightarrow H_*^{T(\alpha)}(X) \rightarrow 0$$

$L_\alpha$  is preserved by  $\tilde{W} \times \text{Aut}$ .

So  $\tilde{W} \times \text{Aut}$  acts on  $H_*^{T(\alpha)}(X)$ .

A subgroup action on the homology of affine Springer fibers:

$$(\tilde{W} \times \text{Aut})_r = \left\{ \gamma \in \tilde{W} \times \text{Aut} : \text{val}(\gamma \alpha(\gamma)) = \text{val}(\alpha(\gamma)) \right. \\ \left. \forall \alpha \in \phi^+ \right\}.$$

preserves the module of relations  $\bigoplus_{\alpha \in \phi^+} L_{\alpha,r}$ .

# Homology of affine Springer fibers in the affine flag manifold

$I \subset G(F)$  Iwahori

$$\begin{array}{ccc} I & \longrightarrow & B \\ \downarrow & & \downarrow \\ G(\mathbb{G}) & \longrightarrow & G \end{array}$$

$Y = Y^G = G(F)/I$  affine flag manifold

$\Lambda \subset T(F)$  lattice of translations.

$\alpha^\vee \in \phi^\vee(G, T)$  nn  $\alpha^\vee(E) \in \Lambda$ .

$$\tilde{W} = \Lambda \rtimes W$$

$\alpha \in \phi^+$  give  $\partial_\alpha \in \mathcal{D}(t)$  differential operator.

$\alpha^\vee \in \Lambda$  root

$w\alpha \in \Lambda$  reflection

$$\begin{aligned} \text{Define } M_{\alpha, \gamma} = & \sum_{d=1}^{\text{val}(\alpha^\vee(\gamma))} (1-\alpha^\vee)^d \underset{\mathbb{C}}{\mathcal{O}}[\tilde{W}] \otimes S(t) \left\{ \frac{d}{d\alpha} \right\} \\ & + \sum_{d=1}^{\text{val}(\alpha^\vee(\gamma))} (1-\alpha^\vee)^{d-1} (1-w\alpha) \underset{\mathbb{C}}{\mathcal{O}}[\tilde{W}] \otimes S(t) \left\{ \frac{d}{d\alpha} \right\}. \end{aligned}$$

$\gamma \in t(F)$

If  $G$  simply connected,  $Y^F$  classifies Iwahori subalgebras of  $\mathfrak{g}^{(F)}$   
 $Y_\gamma$  those containing  $\gamma$ .

Chm: Let  $\gamma \in t(G)$  be a regular element.

Suppose  $H_*(Y_\gamma; \mathbb{C})$  is pure (implying formality)

Then the inclusion  $\tilde{W} \subset Y_\gamma$  induces an exact sequence of  $\mathcal{D}(t)$ -modules:

$$0 \rightarrow \bigoplus_{\alpha \in \Phi^+} M_{\alpha, \gamma} \rightarrow \mathbb{C}[\tilde{W}] \otimes_{\mathbb{C}} S(t) \rightarrow H_*^{T(\mathbb{C})}(Y_\gamma) \rightarrow 0$$

$(\tilde{W} \times \text{Aut})_\gamma$  acts on  $H_*^{T(\mathbb{C})}(Y_\gamma)$ ; it restricts to an action on the ordinary homology

$$H_*(Y_\gamma) = H_*^{T(\mathbb{C})}(Y_\gamma) \{ I \}, \text{ subgroup of } H_*^{T(\mathbb{C})}(Y_\gamma) \text{ annihilated by the augmentation ideal}$$

$\gamma \in \mathcal{D}$ .

$\text{Aut}$  = automorphism group of the based root datum for  $G$

$\subset$  Dynkin diagram automorphisms of  $G$

$\equiv$  in simply connected and adjoint cases

$$\chi_k(T) = \mathbb{Z}\phi^\vee$$

$$\chi^k(T) = \mathbb{Z}0$$

$\tilde{W} = \Lambda \times W$  extended affine Weyl group

$\tilde{W} \times \text{Aut } \mathbb{Q}$  acts on  $T(\mathbb{F})$  and on the root system  $\Phi(G, T)$ ,  
 through  $W \times \text{Aut}$  on  $\Lambda$ .

It acts diagonally on the left on

$$H_*^{T(\mathbb{C})}(\Lambda) \cong \mathbb{C}[\Lambda] \otimes_{\mathbb{C}} S(t)$$

$(\tilde{W} \times \text{Aut})_\gamma$  passes acts on  $H_*^{T(\mathbb{C})}(Y_\gamma)$

$$\text{and on } H_*(Y_\gamma) = H_*^{T(\mathbb{C})}(Y_\gamma)[\mathcal{E}]$$

↳ aug. ideal of  $\mathcal{D}(t)$ .

Springer action (Mirk-Tam talk)

regular  $\otimes$  trivial  $\otimes$  ir from the right on

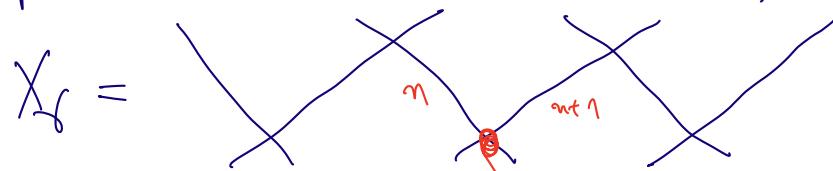

$$\mathbb{C}[\tilde{W}] \otimes S(t).$$

It preserves each  $M_{\alpha, \gamma} \otimes E^{\phi^+}$

passes to an action on  $H_*^{T(\mathbb{C})}(Y_\gamma)$  comp. w/  $\mathcal{D}(t)$ -module  
 structure + commutes w/  $(\tilde{W} \times \text{Aut})_\gamma$ -action.

Corresponds w/ Lusztig's Springer action.

Example:  $G = \mathrm{SL}_2$ ,  $\gamma = t \begin{pmatrix} 1 & 0 \\ 0 & -1 \end{pmatrix}$  equivariant Springer fiber

infinite chain of  $P^1$ 's.

forms  $T \simeq \mathbb{C}^* \subset G$

$t^n G_F \oplus t^{-n} G_F$  lattices

$\Lambda \subset \mathbb{C}((t))$ ,  $\gamma \lambda \in \Lambda$ .

$$n \in \mathbb{Z}$$

$$C_n = \{\lambda \in \mathbb{C}((t))^{(2)} \mid$$

$$\begin{aligned} t^n \mathbb{C}[[t]] \oplus & \subset \Lambda \subset t^{n-1} \mathbb{C}[[t]] \oplus \\ t^{-n+1} \mathbb{C}[[t]] & \underbrace{\qquad\qquad\qquad}_{\Lambda'} \\ \frac{1}{t} \Lambda' & \end{aligned}$$

Then  $C_n \cong P^1$

$T$ -action

$$\tilde{u} = \begin{pmatrix} u & 0 \\ 0 & u^{-1} \end{pmatrix}$$

$$g = \begin{pmatrix} 1 & x \\ 0 & 1 \end{pmatrix} \begin{pmatrix} t^n & 0 \\ 0 & t^{-n} \end{pmatrix} \quad x \in t^{2n-1} G_F / t^{2n} G_F$$

$$\tilde{u} g \tilde{u}^{-1} = \begin{pmatrix} 1 & u^2 x \\ 0 & 1 \end{pmatrix} \begin{pmatrix} t^n & 0 \\ 0 & t^{-n} \end{pmatrix}$$

so  $\mathbb{C}^*$  acts with weight 2 on each  $P^1$  component of  $X_\gamma$  with fixed points the intersection points  $= 1 = \mathbb{Z}$

$$\mathbb{C}[\Lambda] \otimes H_{\mathbb{C}}^{\tau(C)}(\text{pt}) \xrightarrow{\qquad S_1 \qquad} \mathbb{C}[x]$$

$$H_*^{T(C)}(\mathbb{Z}) \rightarrow H_*^{T(C)}(X_S) \rightarrow 0$$

- $\alpha \in \phi^+$  unique positive root.  $\text{val}(\gamma) = 1 \in \mathbb{Z}$
  - $L_{\alpha, \gamma} = (1 - \alpha^\vee) \mathbb{C}[\lambda] \otimes \boxed{\mathbb{C}[x] \{ \partial_\alpha \}}$ 
    - $\mathbb{C}[x]$  functions annihilated by  $\partial_\alpha$
    - $\approx \mathbb{C}$  constant polynomial functions.

so that  $H_x^{(\infty)}(X_x) \cong$

# ① Purity

$X$  cpx proj variety

Deligne: increasing weight filtration  $(W^m)$  on  $H^*(X; \mathbb{C})$   
 $\Rightarrow$  increasing weight filtration on  $H_*(X, \mathbb{C})$  by duality

" $X$  pure" means by definition

$$\text{Gr}^m W(H^i(X)) = 0 \text{ if } m \neq i$$

$$\Leftrightarrow \text{Gr}^{-m} W(H_i(X)) = 0 \text{ if } m \neq i.$$

The strictness: If  $f: X \rightarrow Y$  morphism of projective varieties,  
 $f_*: H_*(X) \rightarrow H_*(Y)$  is strict w.r.t. the weight filtration:

$$(\text{im } f_*) \cap W^m(H^*(Y)) = f_* W^m(H^*(X)).$$

allows to extend the definition of the weight filtration  
 to any ind projective variety (inductive limit of projective  
 varieties)  $X = \varinjlim_{i \in I} X_i$  by setting

$$W^m H_*(X) = \varinjlim W^m(H_*(X_i))$$

$$\subset \varinjlim H_*(X_i) = H_*(X).$$

[Homology commutes w/ direct limits]

[ $\mathrm{rk}$  : thickness of differential]

Affine Springer fibers are ind-varieties

$\Rightarrow$  homology/cohomology spaces can be infinite dimensional.

It's good to see them as module over an as big as possible algebra to get a good grasp on them.

(even better if we know (a part of) the structure of the category of modules over this algebra.)

Here: Ehreinck algebras. Subject of talk 7 by Sasha.  
[graded]

## ② Equivariant homology

A cpx forms

$$\alpha = \text{Lie } A$$

$$X^*(A) \otimes_{\mathbb{Z}} \mathbb{C} \xrightarrow{\sim} \alpha^*$$

$$S(\alpha) = \text{Sym}(\alpha) = \bigoplus_{d=0}^{\infty} \text{Sym}^d(\alpha^*)^*$$

cpx valued pol-functions on  $\alpha^*$ .

$\varphi: A \rightarrow \mathbb{C}^*$  character.  $\rightarrow$  line bundle on  $BA$   $L^\varphi$ .  
w/ 1st Chern class  $c_1(\varphi)$

$$\mathcal{D}(\alpha) \xrightarrow{\sim} H^*(BA) = H_A^*(pt) \quad [\text{Chern-Weil iso}]$$

$A \times A \rightarrow A$  multiplication induces  $m: BA \times BA \rightarrow BA$ .  
endows  $H_A^*(BA)$  w/ algebra structure.

$$H_A^*(pt)$$

cap product

$$H_A^*(pt) \otimes H_A^*(pt) \xrightarrow{\text{module over }} H_A^*(pt)$$

Hopf formula

$$\begin{aligned} x &\in H^e(BA) \\ &\cong C_1(L) \end{aligned}$$

$m^* L$  is a line bundle  
over  $A \times A$  associated to the  
character  $\varphi \circ m$  whose

derivative at 1 is

$$A \times A \rightarrow \mathbb{G}_m \times \mathbb{G}_m \rightarrow \mathbb{G}_m \quad d\varphi_{(1,1)}$$

$$\begin{aligned} & \varphi((1+h)(1+h')) \\ &= \varphi(1+h+h') \\ &= 1 + d\varphi_1(h+h') \end{aligned}$$

so  $m^*x = x \otimes 1 + 1 \otimes x$

so  $x$  acts on  $H_x^A(pt)$  as a derivation:

$$(x \cap m(y, z)) = x \cap m_x(y \otimes z)$$

$$\begin{aligned} & \left( f^*(f^{*\sigma} \circ \sigma) = c \cap f^{*\sigma} \right) \stackrel{\text{(naturality of cap-product)}}{=} m_x(m^*(x) \cap (y \otimes z)) \\ &= m_x((x \otimes 1) \cap (y \otimes z) + (1 \otimes x) \cap (y \otimes z)) \end{aligned}$$

$$= m_x((x \otimes y) \otimes z) + m_x(y \otimes (x \otimes z))$$

$$= m(x \otimes y, z) + m(y, x \otimes z)$$

inverse

$S(\sigma) \rightarrow H_x^A(pt)$  dual to Chern class

$$\begin{array}{ccc} \partial_k \otimes S_{ij} & \rightarrow & S_{j-k} \\ \text{SI} & & \text{IS} \\ H_A^{2k}(pt) \otimes H_{2j}^A(pt) & \xrightarrow{\cap} & H_{2j-2k}^A(pt) \end{array}$$

## Change of forms

$$TCA \quad BT \rightarrow BA$$

$$I = \ker \left( H_A^*(pt) \rightarrow H_T^*(pt) \right)$$

$$H_T^*(X) = H_A^*(X) \otimes_{H_A^*(pt)} H_T^*(pt) = \frac{H_A^*(X)}{IH_A^*(X)}$$

[ purity of  $X \Rightarrow X$  equivariantly formal for any forms acting ]

$$H_V^*(X) = H^*(X) \otimes H_V^*(pt).$$

$H_A^*(pt)$  is a module over  $\mathcal{D} = H_A^*(pt)$

and  $H_T^*(X) = H_A^*(X) \{ I \}$  elements of  $H_A^*(X)$  annihilated by the homogeneous ideal  $I$   
 by  $H_A^*(pt)$ -duality.

- A character thing:  $\varphi: A \rightarrow \mathbb{C}^\times$   
 $\partial\varphi \in \omega^* \subset \mathcal{D}(\omega)$   
 $m = \ker \partial\varphi \subset \omega$   
 $j: pt_n \rightarrow pt/A$  induces

null-back  $\mathcal{D}(\omega) \rightarrow \mathcal{D}(m)$  w/ kernel  $\partial\varphi$ .

Dualizing, we get  $j^*: S(m) \rightarrow S(\omega)$  w/ image polynomials annihilated by  $\partial\varphi$ .

extend the  $A$ -action to  $\mathbb{P}^n$ .

$$0 \rightarrow H_{k+1}^A(\mathbb{C}\mathbb{P}^n, \mathcal{E}_0\beta \cup \mathcal{E}_{\infty}\gamma) \xrightarrow{\partial} H_k^A(\mathcal{E}_0\beta) \oplus H_k^A(\mathcal{E}_{\infty}\gamma) \rightarrow H_k^A(\mathbb{C}\mathbb{P}^n) \rightarrow 0.$$

$\parallel$                                $\parallel$   
 $S(\alpha)$      $\xrightarrow{\beta}$      $S(\alpha_2) \oplus S(\alpha_1)$   
 $f$                        $\mapsto$      $(f^*(f), -f^*(f))$

use that  $\text{Ker } q$  is a subtorus of  $A$  (and then that

$$H^k_{\tau}(C^*) \cong S(m^*) .$$

[Instead if not true ? or the only possible problem comes from horizon ?]

$$H_*^A(\mathbb{C}\mathbb{P}^1, \{\infty\}) = H_*^A(\mathbb{C}^*) \cong S(\mathbb{C}^*)$$

At the level of singular chains

dist. triangle

$$\text{pair } C_X^A(\{0\} \cup \{\infty\}) \rightarrow C_X^A(\mathbb{P}^1) \rightarrow C_X^A(\mathbb{P}_1^1, \{0, \infty\})$$

$\downarrow q_{iso}$        $\parallel$        $\uparrow q_{iso}$ .

$$\text{Mayer-Vietoris} \quad C_*^A((\mathbb{P}^1 \setminus \{0\}) \sqcup (\mathbb{P}^1 \setminus \infty)) \rightarrow C_*^A(\mathbb{P}^1) \rightarrow C_*^A(\mathbb{P}^1 \setminus \{0, \infty\}) \quad [1]$$

$G^A(p^1, \dots, p^n)$  → pushforward for loops  
 is dual to pullback in cohomology  
 explaining the formula

+ connection morphism

### Lemma (Bruhat cells)

$$x_0 = K/k \in X$$

$$l \in \Lambda$$

$$\exp \text{map} : G_l = I l x_0 \simeq \text{De} := \bigoplus_{\substack{(\alpha, k) \in \check{\Phi} \\ \text{rel } (\alpha|k) + k < 0}} \mathbb{C} \epsilon^k Y_\alpha$$

\*  $T(\mathbb{C})$ -equivariantly  
\*  $\exp$  commutes w/ loop rotation.  
 $T(\mathbb{C})$ -equivariant isomorphism.

$$\text{rel } (\alpha|k) + k < 0$$

$$\alpha(a) + k > 0 \quad \forall a \in \mathbb{C}_0$$

(\*)

Proof: analogous to the classical Bruhat decomposition.

$I_+$  acts transitively on  $G_e$  (since  $T(\mathbb{C}) \subset I$  commutes with  $I_+$ )

$l x_0$  is stabilized by  $I_+ \cap l G_e l^{-1}$  whose lie algebra is

$$(g l K = l K \Leftrightarrow l^{-1} g l \in K)$$

connected

sum of affine root spaces  $\bigoplus \mathbb{C} \epsilon^k Y_\alpha$

s.t.  $\alpha(\tilde{\alpha}) + k > 0 \quad \alpha \in A$

&  $\boxed{\text{Ad}(\tilde{l}^{-1})(\epsilon^k Y_\alpha) \in \mathfrak{o}_g(0)}$

$\Updownarrow \quad k - \text{val}(\alpha(l)) \geq 0$

$\text{Ad}(\tilde{l}^{-1})(\epsilon^k Y_\alpha) \in \mathfrak{o}_g(0)$

$$(\text{Ad}(\tilde{l}^{-1})Y_\alpha = \epsilon^{\text{val}(\alpha(l))} Y_\alpha)$$

(\*) is  $\tilde{T}(G)$ -invariant complement  $\Rightarrow$  exponential map  
 takes it isomorphically to  $Tl^\infty$ .

$I^+$  is pro-unipotent group  
 $\text{lie } I^+ \xrightarrow{\sim} I^+$  is isomorphism w/ inverse given by  
 $\cup$   $\cup$  logarithm.  
 $\text{lie Stab} \xrightarrow{\sim} \text{Stab}$ .

Fixed points |  $X^{G^\times} = G(\mathbb{C}) \Delta G(0)/G(0)$   
 fixed points of loop rotation

$$X^{T(\mathbb{C})} = \lambda_{x_0} .$$

forms fixed points

Proof: ①.  $G(\mathbb{C}) \cap G(\mathbb{C})/\mathbb{G}_m \subset X^{\mathbb{C}^\times}$  clearly.

loop rotation preserves Bruhat cells.

• suffices to show  $X^{\mathbb{C}^\times} \cap \mathcal{C}_{\mathbb{I}} \subset G(\mathbb{C}) \cap x_0 \mathbb{I} \mathbb{C}^\times$

$\forall l \in \mathbb{N}$ .

Fixed points of  $\mathbb{C}^\times$  on  $D_l$  need  $k=0$ , so exponential is in  $G(\mathbb{C}) \cap \mathbb{I}$  ✓

②.  $\lambda x_0 \subset X^{T(\mathbb{C})}$  clearly

$$\bullet \quad C_{\mathbb{I}}^{T(\mathbb{C})} \cong D_l^{T(\mathbb{C})} = \{0\}$$

so  $T(\mathbb{C})$  acts on  $\mathcal{C}_{\mathbb{I}}$  with only fixed point  $\lambda x_0$ . ■

One dimensional orbits  $X_\lambda \subset X$  1-dim skeleton of  $T(\mathbb{C})$ .

$\lambda \in \Phi^+$  no  $U_\lambda$  1-dim semip. subgrp.

$\lambda \in \Phi^+$  no red. conn. ablg subgrp  $H_\lambda \subset G$  of semi-simple rk 1  
 $\langle T, U_\lambda, U_{-\lambda} \rangle$ .

$X_\lambda = H_\lambda(\mathbb{C}) / H_\lambda(\mathbb{G}) \hookrightarrow X$ .

Lemma (1-dimensional orbits of  $T(\mathbb{C})$ )

$$X_1 = \bigcup_{\alpha \in \Phi^+} X^\alpha$$

If  $\alpha \neq \beta \in \Phi^+$ ,  $X^\alpha \cap X^\beta = \emptyset$

Proof:  $\dim T = 1 \Rightarrow$  a single root (or none)  $\Rightarrow$  both sides coincide w/  $X$ .

Assume  $\dim T \geq 2$

$T(\mathbb{C}) \wr H_\alpha$  factors through 1-dim quotient

$$T(\mathbb{C}) / \ker(\alpha) \Rightarrow X^\alpha \subset X_1.$$

$$X_1 \subset \bigcup_{\alpha \in \Phi^+} X^\alpha \iff \left( X_1 \cap G_e \subset \bigcup_{\alpha \in \Phi^+} X^\alpha \cap G_e \right)$$

Hence

$\rightarrow$  determine 1-dim orbit on  $D_\ell$   $\rightarrow$  coordinate axes  
 $\underbrace{\text{of } T(\mathbb{C})}_{\text{on } D_\ell}$   $\mathbb{C} \varepsilon^k Y_\alpha$ .

$\alpha \in \Phi^+$  fixed.  $D_{\ell, \alpha} = \bigoplus_{\substack{k \in \mathbb{Z} \\ \alpha(\alpha) + k > 0 \\ k \in \mathbb{Z}}} \mathbb{C} \varepsilon^k Y_\alpha = \varepsilon^{\ell \operatorname{val}(\alpha)} \mathbb{C} Y_\alpha$

$C_{\ell, \alpha}$  corresponding subset of the Bruhat cell.

$$C_{\ell, \alpha} = X^\alpha \cap C_\ell = \text{Bruhat cell of } X^\alpha$$

$$\left[ I^+ \ell G(\mathbb{G}) / \mathbb{G}(\mathbb{G}) \right] \subset \left[ I^+ \ell H_\alpha(\mathbb{G}) / H(\mathbb{G}) \right]$$

$$\text{If } \alpha \neq \beta, D_{\ell, \alpha} \cap D_{\ell, \beta} = \emptyset \} \quad \text{so} \quad X^\alpha \cap X^\beta = \Lambda$$

$$\rightarrow X^\alpha = \bigsqcup X^\alpha \cap C_\ell$$

$$X^\beta = \bigsqcup X^\beta \cap C_\ell \quad \blacksquare$$

## SL(2) ASF

**Proposition** : Fix  $r \geq 1$ . Then  $P_r \{\partial_t\} \subseteq J_r$ :

$$\begin{aligned} \ker(\partial_t) \cap \sum_{\substack{|b-a| \leq r}} \mathbb{Q}(l_b - l_a) \otimes \mathbb{Q}[(a+b)x - t] \\ = \sum_{d=1}^r (1-x^r)^d \mathbb{Q}[1] \otimes \mathbb{Q}[x] \{\partial_x^d\}. \end{aligned}$$

Prof: > is easy

$\cdot \subset P_r \{\partial_t\}$  vector subspace of  $P_r$  spanned by  
 $(l_b - l_a) \otimes g_{ab} ((a+b)x - t)$

with  $g_{ab} = G_{ab} z^h$  homogeneous of degree  $h$ .

$$G_{ab} \in \mathbb{Q}.$$

$$P_{r,h} \{\partial_t\} = P_{r,h} \cap \ker(\partial_t).$$

Then  $P_r \{\partial_t\} = \sum_{h \geq 0} P_{r,h} \{\partial_t\}.$

Lemma 12.4  $\Rightarrow P_{r,h} \{ \partial_t^k \} = 0 \quad \forall h \geq r$

Need to show  $P_{r,d-1} \{ \partial_t^k \} \subset J_r \quad \forall d \leq r$ .

Both are  $\mathbb{Q}[\partial_x]$ -modules  
 $P_r \{ \partial_t^k \}$  and  $J_r$

# Homology of affine Springer fibers in the affine flag manifold

$$F = \mathbb{C}((\epsilon))$$

$$TC \subset BC \subset G$$

$$I \subset G(F) \quad \text{Iwahori}$$

$$\text{aff flag manifold } Y = Y^G = G(F)/I.$$

$\Lambda \subset T(F)$  lattice of translation

$$\lambda^\vee \in \phi^\vee(\alpha, \tau) \underset{\text{wt.}}{\rightsquigarrow} \lambda^\vee(\epsilon) \in \Lambda,$$

$$\tilde{W} = \Lambda \rtimes W.$$

$$Y = \bigsqcup_{w \in \tilde{W}} IwI/I \quad \text{Bruhat decomposition.}$$

Each cell has a unique fixed point of  $T(F)$ :

$$Y^{T(F)} \cong \tilde{W} \quad \text{comp. w/ lattice of translations.}$$

$$\alpha \in \Phi^+ \text{ root} \rightsquigarrow \omega_\alpha \in W \text{ reflection.}$$

$W_\alpha = \{1, \omega_\alpha\}, H^\alpha \text{ conn. red. grp of ss rk 1 containing } T \text{ and}$

$U_\alpha \subset G \text{ root subgrp.}$

$Y^\alpha$  aff flag manifold for  $H^\alpha$ .

If  $u \in Y$   $T(\mathbb{C})$  fixed point,

$$\phi_u : Y^\alpha \xrightarrow{\sim} H^\alpha \cdot u \subset Y$$

Restricts to iso of aff Springer fibers:

$$Y_{\leq v}^\alpha \cong Y_\gamma \cap H^\alpha \cdot u. \quad \forall \gamma \in \mathfrak{t}(G), \\ v = \text{rel } \alpha'(\gamma).$$

$$Z^\alpha := \bigcup_{u \in W_\alpha \backslash W} H^\alpha \cdot u = \bigcup_{u \in W_\alpha \backslash W} \phi_u(Y^\alpha)$$

Lemma:  $\gamma \in \mathfrak{t}(G)$  regular.

The union of 0 & 1-dim orbits of  $T(\mathbb{C})$  in the  
aff Spr. fibers is

$$(Y_\gamma)_1 = \bigcup_{\lambda \in \phi^f} Z_\gamma^\lambda$$

$$Z_\gamma^\lambda = Y_\gamma \cap Z^\alpha = \bigcup_{u \in W_\alpha \backslash W} \phi_u(Y_{\leq v}^\alpha)$$

$$\text{If } \alpha + \beta, \quad Z_\gamma^\lambda \cap Z_\gamma^\beta = \emptyset.$$

Defn: Each  $\alpha \in \Phi^+$  corresponds to a deg. one diff operator

$\partial_\alpha \in \mathcal{D}(t)$ ,  $\alpha^\vee \in \Lambda$  and  $w_\alpha \in W$ .

$\alpha \in \Phi^+$ , define the  $\mathcal{D}(t)$  submodule  $M_{\alpha, \gamma}$  of

$$\mathbb{C}[\tilde{W}] \otimes_{\mathbb{C}} S(t)$$

$\text{gr}_{\alpha}(\alpha^\vee \gamma)$

$$M_{\alpha, \gamma} = \sum_{d=1}^{\text{gr}_{\alpha}(\alpha^\vee \gamma)} (1-\alpha^\vee)^d \mathbb{C}[\tilde{W}] \otimes_{\mathbb{C}} S(t) \{ \partial_\alpha^d \} \\ + \sum_{d=1}^{\text{gr}_{\alpha}(\alpha^\vee \gamma)} (1-\alpha^\vee)^{d-1} (1-w_\alpha) \mathbb{C}[\tilde{W}] \otimes_{\mathbb{C}} S(t) \{ \partial_\alpha^d \}.$$

$\gamma \in t(6)$  regular element.

Assume  $H_{\alpha}^*(Y_{\gamma}; \mathbb{C})$  is pure.

Then,  $\tilde{W} \subset Y_{\gamma}$  induces an exact sequence of  $\mathcal{D}(t)$ -modules

$$0 \rightarrow \sum_{\alpha \in \Phi^+} M_{\alpha, \gamma} \rightarrow \mathbb{C}[\tilde{W}] \otimes_{\mathbb{C}} S(t) \rightarrow H_{\alpha}^{T(\mathbb{C})}(Y_{\gamma}) \rightarrow 0$$

$(\tilde{w} \times \text{Aut})_g$  acts on this eq. from grp & restricts to an action on the ordinary homology

$$H_*(Y_r) = H_*^{T(\mathbb{C})}(Y_r) \{ I \}$$

Springer action right

$$\tilde{W} \curvearrowright \mathbb{C}[\tilde{W}] \otimes S(E)$$

regular  $\otimes$  trivial

It preserves each relation  $M_{X,Y} \times E \notin$ .

Assume  $H_*(Y_r; \mathbb{C})$  is pure -

induces action of  $\mathbb{C}[\tilde{W}]$  on homology compatible w/ the  $D(E)$  module structure, & commute w/ the  $(\tilde{w} \times \text{Aut})$  act.

~ It restricts to action of  $\tilde{W}$  on ordinary cohomology,  
coincides w/ Lusztig action.

Action of trigonometric DAHA.

## Affine flag manifold for $SL(2)$

$$G = SL(2)$$

$$B = \begin{pmatrix} * & * \\ 0 & * \end{pmatrix}$$

$I \subset G(\mathbb{C})$  Iwahori

$\mathcal{Y} = \mathcal{Y}^{SL(2)} = G(F)/I$  affine flag manifold.

$x_0 = I/\mathbb{I} \in \mathcal{Y}$  base point.

$T \subset G$  torus of diag. matrices

$$\Lambda = \left\{ \alpha^v(\epsilon^m) : m \in \mathbb{Z} \right\} \text{ translation lattice}$$

$\alpha^v \in \Phi^v$  simple coroot determined by  $T \subset B$ .

$T(\mathbb{C}) \cap \mathcal{Y}$  w/ fixed points

$$l_m = \begin{pmatrix} \epsilon^m & 0 \\ 0 & \epsilon^{-m} \end{pmatrix} I$$

$$\text{and } r_m = \begin{pmatrix} 0 & \epsilon^m \\ -\epsilon^{-m} & 0 \end{pmatrix} I \quad , \quad m \in \mathbb{Z}$$

$W = \{1, w_2\}$  Weyl grp of  $G$ .

$\tilde{W} = \Lambda \times W$  acts simply transitively on these fixed points

$\tilde{W} \simeq$  fixed points

$$\begin{aligned} * & \quad d^r(\varepsilon^m) \mapsto l_m \\ * & \quad w_\alpha \mapsto r_\alpha \in Y \end{aligned} \quad ) \rightsquigarrow \begin{cases} l_a l_b = l_{a+b} \\ r_a r_b = r_{a+b} \\ r_a l_b = r_{a-b} \\ r_a r_b = l_{a-b}. \end{cases}$$

\*  $x_0 = b$  base point

$$* \quad \alpha f_1 = r_0.$$

$\tilde{T}(C)$  extended torus.

If  $m \leq -1$ ,  $s \in \mathbb{Z}$ , the  $\tilde{T}(C)$ -orbit of  $l_s x_m$  is 1-dim, and connects  $l_s$  and  $r_{m+s}$ .

$$\begin{array}{ccc} T & \downarrow & \text{proj to affine grassmannian.} \\ \mathcal{X}^{SL(2)} & & \\ \mathcal{Y}^{SL(2)} & & \end{array}$$

$G(F)$  equiv filtration w/ fibers  $G(C)/B(C) \simeq \mathbb{P}_F^\gamma$ .

$$\pi(l_m) = \pi(r_m) \quad \forall m,$$

$$\pi(x_m) = \pi(y_m) \quad m \leq 0.$$

For  $m \leq 0$ ,  $T(F) \cdot x_m$  is  $(-m)$ -dim

projects under  $\pi$  iso to  $T(F) \cdot \pi(x_m)$ .

For  $m \leq 1$ ,  $\dim(T(F) \cdot y_m) = 1-m$ .

If  $m < 0$ , fibers over the  $T(F)$ -orbit of  $\pi(y_m) = \pi(x_m)$

w/ 1-dim affine spaces  
fibers

• Fix  $y \in t(g)$ ,  $Y_y = \{xI \in Y : \text{Ad}(x^{-1})(y) \in \text{Lie}(I)\}$   
preserved by  $\tilde{T}(g)$ ,

$\pi: Y_y \rightarrow X_y$  surj. Not a fibration.

$H_*(Y_y)$  is pure

Prop:  $Y = \bigsqcup_{n \leq 0} T(F) \cdot \{x_n \vee y_{n+1}\}$

$Y_\delta = Y_{\leq r} = \bigcup_{n=-r}^0 T(F) \cdot \{x_n \vee y_{n+1}\}$

$\gamma = \text{rat}(\alpha(\delta))$

$\gamma(s, t) \in \mathbb{Z}^2$ ,  $\exists!$  Est  $\subset Y$  1-dim orbit of  $\tilde{T}(g)$ , connecting

$s$  and  $t$ , giving all 1-dim orbits of  $\tilde{T}(g)$  in  $Y$ .

$\tilde{T}(g)$  acts on Est through  $(x, s+t)$ .

$\text{Est} \subset Y_\delta \Leftrightarrow -r \leq t-s \leq r+1$ .

$$\alpha^r \text{ gives } S(E) \cong \mathbb{C}[x, t]$$

$$D(E) \cong \mathbb{C}[\partial_x, \partial_t].$$

$$Y \in E(6), v = \text{val}(\alpha'(Y)).$$

$M_{ab} \subset \mathbb{C}[\tilde{w}] \otimes_S S(E)$  spanned by

$$(l_a - r_b) \otimes g_{ab}((a+b)x - 2t)$$

$g_{ab}$  polynomial.

$M_{ab}$  is  $D(E)$ -module.

$$Q_v = \sum_{-v \leq b-a \leq v-1} M_{ab}$$

$\tilde{w} \in Y$  induces s.e.s in  $T(\mathcal{O})$ -equiv coh:

$$0 \rightarrow Q_v \{\partial_E\} \rightarrow \mathbb{C}[\tilde{w}] \otimes_S S(E) \rightarrow H_*^{T(\mathcal{O})}(Y) \rightarrow 0$$

**Proposition:** For  $v \geq 1$ , the module of relations  $Q_v \{\partial_E\}$  is

spanned by

$$\sum_{d=1}^v (1-\alpha^v)^d \mathbb{C}[\tilde{w}] \otimes_S S(E) \{\partial_x^d\}$$

and  $\sum_{d=1}^{\infty} (1-\alpha^v)^{d-1} (1-w_\alpha) \subset [\tilde{w}] \otimes S(t) \{ \mathcal{D}_x^d \}.$

Next step: groups of semisimple rank one

$H$  ss rank 1.

$$T \subset B \subset H$$

$$I \subset H(F) \cap w.$$

$\gamma^H = H(F)/I$  aff flag man. for  $H$ .

$\alpha^\vee \leadsto w_\alpha \in W$  in bryl grp of  $H$

$$\langle \alpha^\vee \rangle \subset \Lambda^H$$

1-dim.

$\mathcal{D}_\alpha \in \mathcal{D}(t)$  degree 1.

$\tilde{w} = \lambda \circ w$ . extended affine Weyl grp.

$SL(2) \hookrightarrow H$  gives

$$\phi_\alpha : Y^{SL(2)} \rightarrow Y^H$$

$T \in t(0)$  reg.

$$r = \text{val } \alpha^\vee(\gamma).$$

$$Y^H = \bigcup_{\ell \in \Lambda^H / \langle \alpha^\vee \rangle} \ell \cdot \phi_\alpha(Y^{SL(2)})$$

$$Y_\gamma^H = \bigsqcup_{\ell \in \Lambda^H / \langle \alpha^\vee \rangle} \ell \not\propto (Y_{\leq v}^{S_2(2)}).$$

Prop. We have

$$0 \rightarrow Q_v\{\mathcal{I}_v\} \rightarrow \mathbb{C}[[w]] \otimes_{\mathbb{C}} S(\mathbb{C}) \rightarrow H^{\text{rig}}_v(Y_{\leq v}) \rightarrow 0$$

Hessenberg varieties (De Mari; Procesi, Shayman)

$$h: \{1, \dots, n\} \rightarrow \{1, \dots, n\}$$

Hessenberg function:  $h(i+1) \geq \max(i, h(i))$

$$\chi: \mathbb{C}^n \rightarrow \mathbb{C}^n$$

$$\chi(x_h) = \left\{ F \text{ full flag} \mid x_i \in \mathcal{F}_{h(i)} \right\}.$$
